Installation Key Data

Parts:

Shelving and Check-out counter

Parts Sizes:

H	2'000 mm
W	800 mm

Conveyor speed: up to 3 m/min

Scope of delivery:

- 1 x MagicCylinder
- 1 x MagicCompact EquiFlow
- 2 x OptiControl CM10 + Light Barrier
- 2 x OptiCenter OC02
- 2 x OptiFlex-AS04 /12 with OptiGun GA02-X
- 4 x OptiFlex W
- 4 x ZA06 + XT 11

Application Success Stories

Intrac's mission is the "Total Customer Service". The simple key concept represents the main target: the full satisfaction of those who put their trust in his competence. To achieve this goal, all departments need to be organized in accordance with this philosophy, even the coating line. The first MagicCylinder was installed to increase the color change capacity and application performance. The excellent result obtained, convinced the customer to replace

the remaining old booth with a new MagicCompact EquiFlow. The superior ventilation technology of this new solution, ensures perfect coating condition inside the booth as well on pre and post coating platform. The air extraction is concentrated where it is needed most, at the entrance and exit of the booth. This prevents powder escaping to the atmosphere and provides ideal airflow to increase the automatic coating performance. In the same time the new OptiCenter with the integrated

ultrasonic sieving machine, installed also in the first booth replacing the old powder center, ensures high flexibility and the best powder coating quality, especially thanks to the possibility to regenerate in the same time recovered and fresh powder. Thanks to this installation the customer has achieved all the objectives: performance, powder saving and flexibility, and allowed us to supply solutions and equipment to an other sister company of Intrac.
